

Bringing It All Together: Export Controls in the Age of AUKUS

2024 Annual Export Controls Training & Conference

6-8 May 2024
Adelaide SA

Presented by

For SMEs working in the defence sector, the Export Controls Training and Conference is an opportunity to:

- Ask experts on US, UK and AU export controls about how reforms will influence your existing commercial contracts.
- Learn how cybersecurity and export controls work together and how evolving standards will affect your ability to tender.
- Learn how primes and the Commonwealth expect you to be able to work with them in the very near future.
- Learn how to work with your Freight Forwarders and Customs Brokers on managing ITAR controlled freight.
- An opportunity to refresh your training on the ITAR, EAR and AU export controls to ensure you are keeping up with the many changes in progress.
- Learn how others are adjusting to changes in a cost-effective way and how to take advantage of opportunities available to companies that are agile during this time of change.

The Export Controls Training and Conference is also an opportunity to network with peers and experts, both formally and informally. The connections you make may help you find the information you need in the near future.

Who should attend:

Day 1: Engineers, Contracts / Business Development, Logistics, Procurement, HR, Project Managers, and Legal staff unfamiliar with export controls. This day serves as an introductory course or a refresher.

Day 2: Legal, C-Suite, Program Managers, Risk and Quality staff. This day begins with a legislative update from AU government representatives and their counterparts in the US and UK. We have a presentation on what it is like to experience a government audit, as well as a panel on how legislative changes impact our industry. Learn what changes are coming to adapt your business and maintain your competitive advantage. Learn what the Commonwealth and Primes expect of your business going forward. You have the option of attending only the legislative briefings and panel discussion in the morning for a reduced fee.

Day 3: Warehouse, Supply Chain, Risk and IT staff. This day is largely about cybersecurity, but also touches moving sensitive hardware, DISP best practices, and new requirements for companies working with Space and Nuclear technologies.
